New Product Announcement: Acuity Rapid Response is Now UL 2560 and UL 1069-R7 Certified for Independent, Assisted, Skilled and Acute Care Facilities.

Ivyland, PA, July 29, 2015-The UL 1069-R7 requirements cover the individual units employed to form a hospital nurse call system (NCS) intended to provide audible and visual communication between patients and hospital personnel. This covers all signaling equipment installed in hospitals as part of their nurse call systems. For years, this has been the industry standard for wired nurse call systems.

With the adoption of wireless technology among leading healthcare facilities, there is now a need for new regulations. The answer for long term care is UL 2560, the standard for Emergency Call Systems for Assisted Living and Independent Living Facilities. As mentioned above, 1069-R7 is another standard for wireless technology and covers both acute care and long term care facilities.

Symtech Solutions is pleased to announce the newest addition to their suite of healthcare communication solution systems. Acuity Rapid Response is the latest emergency response system on the market, has recently been tested and is now UL 1069-R7 approved! Acuity Rapid Response has been tested according to UL standards so you can be assured you're purchasing a reliable system. Great news for independent and skilled nursing facilities, as this legitimizes the quality of their systems.

About Symtech Solutions

Since 1982, Symtech Solutions (symtechsolutions.com) has been dedicated to installing and maintaining life safety communication systems.
