Personalized Medicine for Neuropsychiatric Disorders

AN ASSUREX HEALTH PRESENTATION

PRESENTER

LOCATION

TO REGISTER

RSVP

GeneSight® analyzes how a patient's genes may affect his/her metabolism and response to FDA-approved medicines commonly prescribed to treat neuropsychiatric disorders and chronic pain. The information from the GeneSight test can help clinicians select the medication(s) and dose(s) that are better suited to a patient's condition and genetic makeup. GeneSight can provide an objective and personalized approach to treatment. Four published clinical studies verify the efficacy and utility of GeneSight. Patients whose treatment was guided by GeneSight experienced a 70% greater reduction in depressive symptoms compared to treatment as usual.¹ The GeneSight pharmacogenomic test is developed in the Assurex Health clinical laboratory and is based on patented technology licensed from two world renowned medical centers, Mayo Clinic and Cincinnati Children's Hospital Medical Center, who continue to be research collaborators. In clinical use for more than 5 years, GeneSight has over 8,000 registered healthcare providers and over 80,000 patients who have undergone GeneSight testing.
